

Different Muscles. Different Depths.

Recovery that adapts to what your body needs.

BEOKA TECHNOLOGY

Adjustable Amplitude Technology

One Massage Gun. The Right Depth for Every Muscle.

By Dr Shamsuddin | August 2024

Not every muscle needs the same kind of massage. Your shoulders may need gentle relief after a long day at work, while your legs and back may need deeper percussion following an intense workout. Beoka's Adjustable Amplitude Technology lets you change how deeply the massage head travels into the muscle giving you more control over every recovery session.

Amplitude is different from speed. Speed determines how quickly the massage head moves, while amplitude determines how far it travels with each stroke. Except Beoka, all other massage gun brands in the market use a fixed amplitude, limiting you to one massage depth. With Beoka, you can adjust both depth and intensity to create a massage that better suits the muscle area, sensitivity level and type of recovery you need.

Choose a shallower amplitude for smaller or more sensitive areas, gentle relaxation and everyday muscle tension. Increase the amplitude when you need deeper stimulation for larger muscle groups, such as the thighs, glutes, back and shoulders. This flexibility lets you move from a comfortable daily massage to more powerful post-workout recovery using the same device.

Beoka offers different adjustable amplitude ranges for different lifestyles. Compact models such as the C1-MAX and CUTE-X MAX provide adjustable depths from 4-10 mm for portable everyday relief. The D3-MAX FlexReach offers adjustable depths from 7-15 mm. The TiPRO MAX offers 8-12 mm for more advanced muscle recovery, while the D6 PRO MAX reaches from 8-16 mm for powerful, deep percussion.

Beoka pioneered adjustable amplitude technology to make percussion massage more precise, comfortable and versatile. Instead of forcing every muscle to accept the same depth, Beoka gives you the freedom to adjust your recovery because effective relief should adapt to you, not the other way around.

**Your muscles are different.
Your massage depth should be too.**
